**Barbara McPake, Charles Normand, Samantha Smith, Anne Nolan : Health Economics: An International Perspective** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Health Economics: An International Perspective:

0 of 0 people found the following review helpful. McPake contribution By Ms. Anne Magnus I use this in teaching medical students to be able to have decent informed conversations about the cost and effectiveness of health care. Every health professional should be introduced to this rational, ethical and social perspective of health

This popular textbook provides a comprehensive but accessible coverage of health economic principles and applications. It provides an introduction for those with no previous knowledge of economics, but also more advanced

material suitable for those with a background in economics. Now into its second edition, Barbara McPake and Charles Normand have incorporated developments in economic evaluation and economics of health systems from recent research and experience while retaining an accessible approach and style. The book starts with a section on basic economic principles as applied to health and health care, and goes on to discuss economic evaluation in health care, the economics of health systems and health care finance. Examples and illustrations are taken from a wide range of settings and world regions, reflecting the authors' belief that the same principles apply, and that it is useful to have some understanding of how different countries organise the health system. It provides an understanding of the performance of different health systems from the insurance based approaches in the United States to government funding that is common in Canada and most countries in Europe, and the mixed systems that operate in most low-income countries. This book is ideal for students in public health and related courses, for health care professionals and those studying health economics at a more advanced level.

'A natural choice for the courses I teach to public health physicians. All those ideas I would want them to have heard of are in this book. It is readable, well-arranged and logical and I would have few fears about letting students loose with it by themselves in the first instance. I especially appreciate the illustrations of ideas drawn from countries throughout the world, which certainly reinforces the authors' belief that basic economic principles are universal.' - "Health Economics" 'An essential edition...excellent examples and case studies...ideal for introducing economists to the economics of health [and] a valuable asset for health economics courses.' - "Applied Health Economics and Health Policy" About the Author Barbara McPake is Professor and Director of the Institute for International Health and Development at Queen Margaret University, Edinburgh. Charles Normand is Edward Kennedy Professor of Health Policy and Management at Trinity College, Dublin.
